

FEDERALLY SPONSORED COUNTER-IED TRAINING AND EDUCATION RESOURCES CATALOG

FOR STATE, LOCAL, TRIBAL, TERRITORIAL (SLTT) AND PRIVATE SECTORS

Publication: August 2025
Cybersecurity and Infrastructure Security Agency

This product was developed in coordination with
the Joint Program Office for Countering Improvised Explosive Devices (JPO C-IEDs)

Introduction

The **Catalog of Federally Sponsored Counter-IED Training and Education Resources for SLTT and Private Sectors** lists explosives and improvised explosive devices (IEDs)-related federal training and education resources of value to the SLTT and private sectors. This catalog was developed by the Department of Homeland Security (DHS), Cybersecurity and Infrastructure Security Agency (CISA), Office for Bombing Prevention (OBP) in collaboration with federal interagency partners through the Joint Program Office for Countering Improvised Explosive Devices (JPO C-IED). The JPO C-IED is responsible for coordinating the implementation of the U.S. Policy for Countering IEDs. The resources within support goals and capabilities outlined by this policy and are intended to enhance the effectiveness of U.S. counter-IED efforts, including:

- Enhancing the ability to deter, detect, and prevent IED incidents before these threats become imminent.
- Ensuring that protection and response efforts effectively neutralize or mitigate the consequences of attacks that do occur.
- Leveraging and integrating a “whole-of-government” approach across law enforcement, diplomatic, homeland security, and military disciplines.
- Promoting and enhancing information sharing and cooperation between all levels of government and the private sector.

The resources included are provided directly by the federal government or are federally sponsored but delivered by a partner organization. They may also be listed in other catalogs maintained by individual federal agencies or partner organizations. This catalog will be periodically updated to ensure accuracy and applicability.

The Cybersecurity and Infrastructure Security Agency (CISA) Office for Bombing Prevention (OBP) gathered the information contained in this catalog from publicly available agency resources and in consultation with relevant stakeholders. Some information in the catalog may have changed between the time CISA gathered the information and the time of use. Training resources that were not available in open source or not in effect at the time CISA finalized this report do not appear in this document. This catalog examines a broad range of training and resources, and CISA looks forward to updating the catalog as circumstances allow.

Neither the United States Government nor any agency thereof, nor any of their employees, nor any of their contractors, subcontractors or their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or any third party's use or the results of such use of any information contained in this catalog. Reference to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof or its contractors or subcontractors. This catalog is *not intended to, and does not, create any legal rights*.

Organization

This catalog is organized following the format of the Federal Emergency Management Agency (FEMA) National Training and Education Division (NTED) course catalogs. Resources are listed at the awareness, performance, and management levels to accommodate different job functions within the stakeholder community. Within each level, the resources are organized alphabetically.

LEVEL

- **Awareness-level** resources are designed for stakeholders who require the skills to recognize and report a potential IED incident or who are likely to witness or investigate an event involving the use of hazardous or explosive devices.
- **Performance-level** resources are designed for stakeholders who perform tasks during the initial response to an IED event.
- **Management-level** resources are designed for resource managers or decision-makers who develop plans and coordinate the prevention of, or response to, an IED event.

Resources can also be organized by Registration limited to SLTT sectors, Guidance Only, Mission Area, or Delivery.

REGISTRATION LIMITED TO SLTT SECTOR

Training or Guidance that is only available to SLTT Sector.

GUIDANCE

Downloadable or accessible products delivered via computer and Internet connection.

MISSION AREA

The National Preparedness Goal identifies five mission areas and 32 core capabilities intended to assist everyone who has a role in achieving preparedness for disasters and emergencies, including:

Prevention: Preventing, avoiding, or stopping a threatened or actual act of terrorism.

Protection: Protecting our citizens, residents, visitors, assets, systems, and networks against the greatest threats and hazards in a manner that allows our interests, aspirations, and way of life to thrive.

Mitigation: Mitigating the loss of life and property by lessening the impact of future disasters.

Response: Responding quickly to save lives, protect property and the environment, and meet basic human needs in the aftermath of an incident.

Recovery: Recovering through a focus on the timely restoration, strengthening, and revitalization of infrastructure, housing, and the economy, as well as the health, social, cultural, historic, and environmental fabric of communities affected by an incident.

DELIVERY

Method of delivery for the training and resources identified in the catalog follow a model adapted from the FEMA NTED course catalogs. Training is delivered to qualified participants in four ways:

Residential: Training or guidance occurs at the training provider's facility.

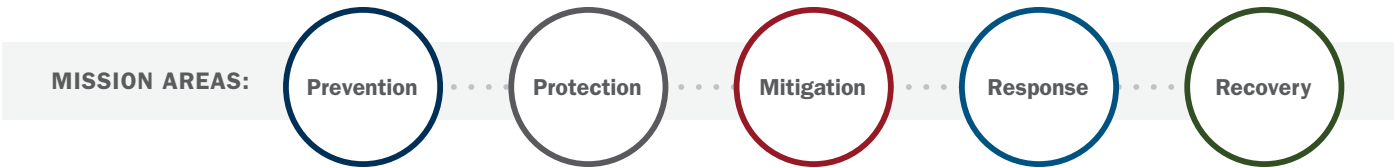

Mobile: Training or guidance occurs at or near the location of the agency that requests the training.

Distance Learning: Training is instructor-led but occurs remotely, virtually, or online.

Web-Based Self-Paced: Training is self-paced and delivered via computer and Internet connection, including micro-learning videos.

Core Capabilities

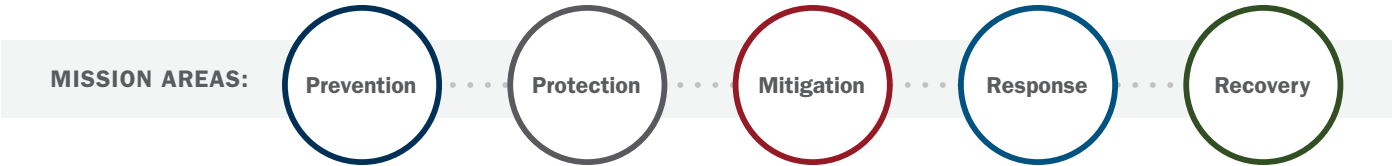

The catalog’s holdings align with the five mission areas and corresponding core capabilities outlined within the National Preparedness Goal. The chart below illustrates the mission areas and core capabilities, including the three core capabilities common to all mission areas (Planning, Public Information and Warning, and Operational Coordination).

Prevention	
1. Planning	5. Interdiction and Disruption
2. Public Information and Warning	6. Screening, Search, and Detection
3. Operational Coordination	7. Forensics and Attribution
4. Intelligence and Information Sharing	

Protection	
1. Planning	7. Access Control and Identity Verification
2. Public Information and Warning	8. Cybersecurity
3. Operational Coordination	9. Physical Protective Measures
4. Intelligence and Information Sharing	10. Risk Management for Protection Programs & Activities
5. Interdiction and Disruption	11. Supply Chain Integrity and Security
6. Screening, Search, and Detection	

Mitigation	
1. Planning	5. Long-Term Vulnerability Reduction
2. Public Information and Warning	6. Risk and Disaster Resilience Assessment
3. Operational Coordination	7. Threats and Hazards Identification
4. Community Resilience	

Response	
1. Planning	9. Logistics and Supply Chain Management
2. Public Information and Warning	10. Mass Care Services
3. Operational Coordination	11. Mass Search and Rescue Operations
4. Infrastructure Systems	12. On-Scene Security, Protection, and Law Enforcement
5. Critical Transportation	13. Operational Communications
6. Environmental Response/Health and Safety	14. Public Health, Healthcare, and Emergency Medical Services
7. Fatality Management Services	15. Situational Assessment
8. Fire Management and Suppression	

Recovery	
1. Planning	5. Economic Recovery
2. Public Information and Warning	6. Health and Social Services
3. Operational Coordination	7. Housing
4. Infrastructure Systems	8. Natural and Cultural Resources

Cost/Funding Source for Resources

There are three options for paying for training and resources:

1. Federally Funded: There is no cost to the requesting organization; providers pay all costs.
2. Homeland Security Grant Program: The requesting organization must pay for its participants' costs, but costs are allowable using authorized Homeland Security Grants.
3. Participant Fee: The requesting organization pays for its participants' costs.

Participants should contact the training or resource provider with any questions about funding.

Catalog Updates or Questions

Please contact the U.S. Department of Homeland Security CISA OBP at obp@cisa.dhs.gov should you have any questions, revisions, or course updates related to this catalog.

AWR-111-W

BASIC EMERGENCY MEDICAL SERVICES CONCEPTS FOR CHEMICAL, BIOLOGICAL, RADIOLOGICAL, NUCLEAR, AND EXPLOSIVE EVENTS

This web-based course introduces participants to medical knowledge relating to CBRNE events. Participants learn the importance of organizational structures used during multi-casualty incidents and the role of the Emergency Medical Services branch and the functions of triage, treatment, and transport units. The course addresses responder precautions and initial actions when responding to CBRNE incidents, emphasizing information gathering and responder safety concepts and methods and tactics to mitigate risks and minimize known hazards. The course covers medical implications of a CBRNE agent, and the potential medical signs, symptoms, and blast patterns resulting in injuries and the various levels of a triage method—Sort, Access, Life-saving interventions, and Transport—and its application during a multi-casualty incident. The course is recommended before attending PER-211 Medical Management of CBRNE Event course, or it can be completed by someone looking for an introduction into this topic.

FOUNDATIONS OF TARGETED VIOLENCE PREVENTION

The goal of this eLearning module is to educate the public on threatening or potentially concerning behaviors and where to report them, providing an opportunity for intervention to prevent targeted violence from occurring.

It seeks to assist in preventing targeted violence by empowering community members to recognize threats or potentially concerning behaviors, understand what behaviors may be displayed by a person who is on a pathway to violence, learn where to report information of concern, and understand how the information reported will be used to keep our communities safe.

FUNDAMENTALS OF CRIMINAL INTELLIGENCE

This awareness-level course presents participants with the core capabilities required for intelligence personnel from an all-crimes, all-hazards perspective. It encompasses traditional crimes, domestic and international acts of terrorism, and other potential crises. This course introduces entry-level intelligence personnel to intelligence and distinguishes between intelligence and information. Among the topics covered are the Intelligence Community, responsibilities of intelligence personnel, and goals and uses of criminal intelligence products. The potential range of customers and their needs are addressed. It incorporates the five-step intelligence process and the importance of critical and creative thinking as it pertains to analysis of information and the intelligence process. Participants will become familiar with the Information Sharing Environment, suspicious activity reporting, and legal authorities and guidance associated with criminal intelligence collection and use, including privacy, civil rights, and civil liberties laws. Finally, this course addresses the benefits of forming strategic partnerships and collaborative networks.

The goal of this course is to ensure intelligence personnel leave equipped with the knowledge and tools necessary to manage, staff, and operate criminal intelligence enterprises within their agencies, in order to help protect and prevent potential threats to the public.

HOMEMADE EXPLOSIVES AWARENESS, RECOGNITION, AND RESPONSE, MOBILE

The Homemade Explosives: Awareness, Recognition, and Response, Mobile course is designed to provide emergency first responders with the skills to recognize and respond to incidents involving Homemade Explosives (HME) through lectures and exercises. Emergency first responders are presented with information necessary to recognize HME precursors, HME manufacturing indicators, and HME exposure indicators, and determine pre-detonation and post-detonation response strategies. Throughout this course, emergency first responders discuss how to implement safe response strategies with recognizing the presence of HME indicators; understanding these response actions is critical to mitigating the hazards associated with HME.

AWR-122

LAW ENFORCEMENT PREVENTION AND DETERRENCE OF TERRORIST ACTS

This course trains law enforcement personnel on actions they can take to prevent, deter, and respond to terrorist acts. The law enforcement officer is part of the front-line defense in preventing and deterring WMD terrorist incidents where the release of WMD agents is likely to occur because of criminal actions. The nature of law enforcement officers' daily work environment provides them with an enhanced understanding of the community not shared by the public. This heightened community awareness provides law enforcement officers with a unique opportunity to prevent or deter potential WMD terrorist incidents. This awareness level course focuses on the recognition, prevention, and deterrence of terrorist activity and crime-related high consequence events for law enforcement and other public safety professionals. Subject areas covered in the course include intelligence gathering, threat recognition, community-oriented policing, counterfeit identification detection, information sharing among agencies, and chemical, biological, radiological, nuclear and explosive (CBRNE) agents or materials that can be procured either legitimately or illegally to produce a WMD.

AWR-122-C

LAW ENFORCEMENT PREVENTION AND DETERRENCE OF TERRORIST ACTS, CUSTOMIZED

This course, also known as Fraudulent Documents, provides participants with an overview of general security features employed by the U.S. government to establish the validity of government documents, as well as known methods used to alter or counterfeit the types of documents commonly presented to law enforcement officers. Several government documents are discussed, including identity cards, driver's licenses, and social security cards.

This course is customized for a one-day presentation consisting of four hours. Beginning and ending times for instruction may be adjusted to accommodate delivery during conferences or in other such circumstances with scheduling constraints.

PREVENTION OF AND RESPONSE TO SUICIDE BOMBING INCIDENTS, MOBILE

The Prevention of and Response to Suicide Bombing Incidents, Mobile course is designed to provide emergency first responders with the skills to prevent and respond to suicide bombing incidents. Emergency first responders are presented with information on how to prevent, deter, and mitigate the effects of a suicide bomber along with active suicide bomber and post-blast response strategies. Throughout this course, emergency first responders discuss the Nine Phases of Bombing Attacks, to understand the steps a suicide bomber follows to conduct their attack; understanding these steps is critical to the successful prevention of a suicide bombing attack.

AWR-219

SITE PROTECTION THROUGH OBSERVATIONAL TECHNIQUES

Emergency responders, security professionals, security support staff, and the public must work together to identify suspicious objects, substances, and people. This course trains public safety personnel to improve their observational techniques by using a four-step ongoing screening process that includes increasing protective awareness, identifying preoperational behaviors, evaluating, and taking action. Participants will use fictional scenarios to examine each step of the process.

At the end of this course, participants will be able to better recognize, communicate, and act upon suspicious behaviors that could indicate a terrorist attack.

WHAT TO DO: SURVIVING A BOMBING ATTACK

Video describes what happens when a bomb detonates and demonstrates the procedures you should follow to survive a bombing attack.

The What to Do Training Video Series (TVS) are instructional videos that communicate the threat posed by improvised explosive devices, explain counter-IED concepts, and demonstrate bombing prevention procedures. The videos show audiences how to react to a bombing attack and deal with a variety of explosive threats such as bomb threats and suspicious items. All videos are free to view on YouTube.

EXPL-CS-0001

ADVANCED EXPLOSIVE DISPOSAL TECHNIQUES

Bomb technicians in the United States are more likely to be killed or injured while conducting an explosives disposal operation than any other mission. In response to this need, the ATF Office of Training and Professional Development, in cooperation with the ATF Explosives Technology Branch, developed the Advanced Explosives Disposal Techniques (AEDT) training program for bomb technicians and explosives specialists. AEDT provides in-depth classroom and range instruction in virtually every aspect of explosives disposal. ATF provides travel and lodging in addition to training, classroom materials, and range tools. Students are also reimbursed a daily per diem rate as determined by U.S. General Services Administration (GSA). The course is delivered at the National Center for Explosives Training and Research (NCETR) located at Redstone Arsenal, AL.

BASIC EMERGENCY RESPONSE TRAINING

This course provides instruction and practical experience in the skills required to safely support mass casualty incident operations during hazardous materials or weapons of mass destruction incidents. Course content includes knowledge and practical experience in the recognition of hazardous materials and weapons of mass destruction clues, identification of hazardous materials, determination of protective actions for hazardous materials and weapons of mass destruction, performance of patient triage and lifesaving interventions, techniques for patient movement and basic rescue, operating in personal protective equipment, the conduct of emergency and tiered patient decontamination, and a survey of select hazardous materials air monitoring and detection instruments. The course culminates in the conduct of a simulated mass casualty incident operation based on a realistic hazardous materials or weapons of mass destruction scenario. The course was designed for those individuals who have no previous training in hazardous materials response and who do not work as hazardous materials responders within their community.

“The course is not intended for experienced hazardous materials professionals and does not meet any certification requirements.”

<https://cdp.dhs.gov/training/course/PER-260>

MISSION AREA: Response

CORE CAPABILITY: Public Health, Healthcare, and Emergency Medical Services

LEVEL: Performance

TARGET AUDIENCE: The target audience for this course is personnel with an implied or stated requirement to support mass casualty incident operations during a hazardous materials or weapons of mass destruction incident.

PROVIDER: FEMA/CDP

DELIVERY: Residential

COST/FUNDING SOURCE: Federally Funded – FEMA

PREREQUISITES: To be eligible to attend this course, a student must:

- be capable of standing and walking for prolonged periods,
- be capable of bending at the waist and kneeling,
- as an individual, be capable of lifting up to 50 pounds and, as a member of a team, larger loads consistent with Occupational Safety and Health Administration (OSHA) recommendations, and
- be capable of donning, operating in, and doffing PPE to include being physically and mentally capable of wearing a respirator that conforms tightly to the face.

BOMB TECHNICIAN CERTIFICATION COURSE

The Bomb Technician Certification Course is a comprehensive program designed to meet the needs of civilian public safety organizations that have bomb squad responsibilities. The six-week Certification Course is offered between six and eight times per year and contains 24 students per class. Upon graduation, students are awarded a certificate of completion, along with a certification card, which identifies them as a certified bomb technician for a period of three years, after which graduates must return to the Hazardous Devices School (HDS) for recertification training. There is no fee for the course but travel and per diem costs must be paid by the employing agency.

CRITICAL DECISION MAKING FOR COMPLEX COORDINATED ATTACKS

Every community is vulnerable to challenging public safety situations such as the following:

- An active shooter at a shopping mall
- The derailment of a train transporting hazardous chemicals
- A bombing incident in a commercial district
- A plane crash
- A chemical, biological, radiological, or nuclear (CBRN) attack or accident

These types of incidents require all available resources and may expand past a single jurisdiction's capabilities. Because one single agency is unlikely to be equipped to handle one such incident, it is critical that effective and efficient coordination efforts be in place among cooperative agencies. Now imagine the possibility of more than one of these situations being deliberately orchestrated to occur simultaneously. Attacks may be in the same geographical area or spread across a region. These attacks, known as complex coordinated terrorist attacks (CCTAs), involve multiple threats that often exceed conventional response tactics. These attacks require a joint response involving members from various disciplines and jurisdictions.

Using classroom instruction and practical exercises, this course enhances the response capabilities of first responders during CCTAs. Topics covered during classroom instruction include characteristics of a CCTA, public safety response considerations, command operations and strategies, and critical information about situational and domain awareness. This course uses several notable case studies to provide real-life examples of the characteristics of a CCTA.

Tabletop exercises allow participants to interact with responders from other disciplines to effectively address a variety of CCTA scenarios.

HAZARDOUS MATERIALS TECHNICIAN

HMT is an enhanced version of the course previously known as, “Emergency Responder Hazardous Materials Technician for CBRNE Incidents (ERHM).”

Hazardous Materials Technician (HMT) is a five-day course that prepares Operations-level responders for Technician-level Hazardous Materials (HAZMAT) certification. This 40-hour course, based on NFPA® 1072: Standard for Hazardous Materials/Weapons of Mass Destruction Emergency Response Personnel Professional Qualifications and NFPA® 472 standards, provides participants with HAZMAT-specific response knowledge and skills, enabling them to respond safely and effectively to a suspected incident at the hazardous materials technician level. Participants receive hands-on training in donning and doffing Personal Protective Equipment (PPE) Levels A and B, containing leaks and drum overpacking, containing leaks in pressurized containers, and performing technical and mass decontamination. The HMT course culminates with performance of these offensive-level tasks in an activity in which the participants apply the knowledge and skills learned in a simulated HAZMAT environment.

<https://cdp.dhs.gov/training/course/PER-272>

MISSION AREA: Response

CORE CAPABILITY: Environmental Response/
Health and Safety

LEVEL: Performance

TARGET AUDIENCE: Operational-level responders with technician-level HAZMAT response duties, assignments or requirements in their jurisdiction

PROVIDER: FEMA/CDP

DELIVERY: Residential

INCIDENT RESPONSE TO TERRORIST BOMBING, RESIDENTIAL

Course is designed to provide emergency first responders with the skills to recognize and respond to terrorist bombing incidents through lectures, exercises, and live-explosive field demonstrations. Emergency first responders are presented with information necessary to recognize explosives and their effects, identify improvised explosive devices and their components, and determine pre-detonation and post-detonation response strategies. Throughout this course, emergency first responders use the concepts they have learned to implement safe response strategies in bombing scenarios; understanding these recognition and response actions is critical to mitigating the effects of a bombing incident.

PER-265

LAW ENFORCEMENT RESPONSE ACTIONS FOR CBRNE INCIDENTS

The course provides law enforcement personnel an opportunity to receive advanced instruction and to apply the knowledge and skills learned through PER-264, Law Enforcement Protective Measures for CBRNE Incidents in realistic incident response scenarios involving an active human threat in a hazardous materials/weapon of mass destruction environment. Students receive practical experience in establishing initial command for a hazardous materials/weapon of mass destruction incident and identification of hazardous materials and weapons of mass destruction to include emplaced threats and illicit laboratories. The course culminates with groups of officers responding to and apprehending an active human threat in a set of complex coordinated attack scenarios.

PER-211

MEDICAL MANAGEMENT OF CBRNE EVENTS

What if a catastrophic event occurs? Will you be ready? Will you need a special level of protection? Is decontamination necessary? Do you have the right medications?

PER 211, Medical Management of Chemical, Biological, Radiological, Nuclear and Explosives (CBRNE) Events answers these questions and more as you learn how to distinguish between different agents of concern that could be used in a major incident.

This course is a combination of facilitated discussions, small-group exercises, Human Patient Simulator hands-on scenarios, and traditional classroom discussions. Exercises are conducted in a CBRNE scenario using both adult and pediatric Human Patient Simulators to reinforce classroom lectures and interaction.

This course promotes critical thinking skills while utilizing the RAPID-Care concept. The multi-discipline make-up of the participants helps to strengthen information sharing, communications, and medical surge capabilities.

PHYSICAL SECURITY TRAINING PROGRAM (PSTP)

The Physical Security Training Program (PSTP) is an introductory physical security training program designed to provide baseline knowledge of physical security systems and procedures as defined by the Interagency Security Committee (ISC) guidelines. The physical security assessment process is the common thread used in teaching this program. The PSTP includes conceptual security considerations, vulnerabilities assessments, and familiarization with hardware and procedures. Students will participate in various physical security assessments, draft a written report, and participate in various student-centered learning activities. Students will also observe a live explosive demonstration.

POST-BLAST INVESTIGATIVE TECHNIQUES I

This is a basic post-blast course designed to teach a systematic method of investigating an explosion scene. The course provides instruction in explosives identification and applications, explosives effects, IED component recognition, and evidence collection. The course is delivered at a variety of locations throughout the United States based on requests from ATF Field Divisions. The course is comprised of classroom participation, an explosives demonstration, and actual investigation of a post-blast scene. Students must provide their own transportation, lodging, and meals. ATF provides instructors, classroom supplies, training materials, and range tools. Student selection is conducted by the ATF Field Office hosting the training.

PREVENTION OF AND RESPONSE TO SUICIDE BOMBING INCIDENTS

The Prevention of and Response to Suicide Bombing Incidents, Residential course is designed to provide emergency first responders with the skills to prevent and respond to suicide bombing incidents through lectures, exercises, and live-explosive field demonstrations. Emergency first responders are presented with information on how to prevent, deter, and mitigate the effects of a suicide bomber along with active suicide bomber and post-blast response strategies. Throughout this course, emergency first responders use a series of tools and documents, including the Nine Phases of a Bombing Attack, to understand the steps a suicide bomber follows to conduct their attack; understanding these steps is critical to the successful prevention of a suicide bombing attack.

TACTICAL RESPONSE TO SUICIDE BOMBING INCIDENTS

Tactical Response to Suicide Bombing Incidents (TRSBI) is a residential course that provides law enforcement tactical officers with the knowledge and skills to prevent and respond to suicide bombing incidents. Through lectures, discussions, case studies, and live-explosive field demonstrations, law enforcement tactical officers are presented with information on preventing, deterring, and mitigating the effects of a suicide bomber. In addition, course participants learn to implement response strategies for active suicide bombers and post-blast incidents. The course culminates with a series of performance-based tactical exercises where course participants can apply the knowledge provided in the course and practice life-saving tactics, techniques, and procedures in suicide bombing scenarios.

CRISIS MANAGEMENT AFFECTING INSTITUTIONS OF HIGHER EDUCATION: A COLLABORATIVE COMMUNITY APPROACH

This course trains campus and community members, and others involved in crisis management duties and responsibilities related to institutions of higher education. To effectively manage a crisis, a whole community approach should be applied and implemented using risk management strategies, effective crisis communication, and a series of well-developed plans. The course uses FEMA's five mission areas (Prevention, Protection, Mitigation, Response, and Recovery) and has specific emphasis on the unique aspects of response to crisis management involving institutions of higher education and the communities in which they are located. The course utilizes the integration principles of the National Incident Management System (NIMS), case studies, and activities are presented to aid the participants in recognizing potential gaps in their current crisis management program. The course concludes with a practical application, role-play exercise in which participants will be able to reason through a simulated incident at an institution of higher education by utilizing the principles and concepts provided in the course.

PLANNING: EMERGENCY OPERATIONS

This course is designed to give basic concepts and planning steps to those new to the field of emergency management so that they may apply planning discipline and skills to challenges in their jobs. The course content includes Emergency Management Planning doctrine and steps to take to accomplish writing plans and using them to deal with special events, which are common challenges for all jurisdictions.

The content also derives from the Comprehensive Preparedness Guide 101, Developing and Maintaining State, Territorial, Tribal and Local Government Emergency Plans, and its six-step planning process and inclusive whole community philosophy. Likewise, doctrine from the Comprehensive Preparedness Guide 201, Threat and Hazard Identification and Risk Assessment (THIRA), is included in the course. Special event planning is then explained in the course, and table group activities to analyze plans for special events are conducted.

SPORTS AND SPECIAL EVENTS INCIDENT MANAGEMENT

This 16-hour course develops athletic department staff, facility management personnel, campus public safety personnel, emergency response supervisors, and others involved in sports/special event management to better manage incidents that could occur during an event. The course provides participants the skills necessary to effectively manage an incident by applying and implementing a multi-disciplinary management team approach as described in the National Incident Management System. The course has specific emphasis on the unique aspects of response to an incident occurring during a sports/special event, including considerations for business continuity and after-action activities. The course concludes with a practical application, role-play exercise that is customized to the facility in which the course is delivered. It provides specific emphasis on incident action planning and resource management processes.
