# LEVEL UP
# YOUR DEFENSES
## WITH THESE CYBERSECURITY BEST PRACTICES

### USE **LOGGING & MONITORING**

Log system activity so your team can monitor signs of threat actors trying to access your systems.

### **BACK UP** DATA

Incidents happen, but when you back up critical information, recovery is faster and less stressful. Put a backup plan in place to protect your systems and keep things running smoothly.

### **ENCRYPT** DATA

Encrypting your data and devices strengthens your defense against attacks. Even if criminals gain access to your files, information stays locked and unreadable. Make encryption part of your security strategy.

## MORE WAYS TO
## STAY SECURE

### SHARE CYBER INCIDENT INFORMATION WITH CISA

Report incidents to CISA to help warn others and sign up for alerts to help you stay ahead of threats: **cisa.gov/report**.

### MIGRATE TO THE **.GOV DOMAIN**

State, local, tribal and territorial governments can migrate to .gov to increase public trust and reduce the chance of impersonation attacks. Learn more at **get.gov**.
