

# INSIDER THREAT MITIGATION WORKSHOP

The Insider Threat Mitigation Workshop offered by the Cybersecurity and Infrastructure Security Agency (CISA) provides public and private sector stakeholders with information regarding potential threats posed by insiders. The workshop also provides insights on consequences resulting from a successful attack or unintended action, and suggested cost-effective measures to mitigate risk.

Nearly one in seven US workers report feeling unsafe at work according to a [survey on workplace violence](#) released by the Society for Human Resource Management (SHRM); and, according to OSHA **over 2 million American workers report having been victims of workplace violence resulting in hundreds of deaths each year.**

**Two hours in duration**—may be abbreviated on an as needed basis.

Instructor-based training that is **adaptable for virtual or in-person sessions.**

**Updated periodically** to ensure currency of information and best practices.

This training is based on the principles captured in the CISA [Insider Threat Mitigation Guide](#) and consists of two parts.

## PART 1: HIGH-LEVEL OVERVIEW OF INSIDER THREAT CONCEPTS

## PART 2: BEGIN BUILDING OR IMPROVING ORGANIZATION'S INSIDER THREAT MITIGATION PROGRAM

A **breakout session with question prompts** encourages stakeholders to discuss key concepts and to improve their own program.

The instructor leverages an **interactive learning model** whereby participants are engaged to gauge and enhance understanding of key concepts.

Insider Threat incidents in the United States cause billions of dollars in damage to organizations each year and impart significant negative impact on employees, both directly and indirectly. Typically, the cost of managing an insider incident and recovery is significantly higher than the cost of establishing and maintaining an insider threat program in the first place. Organizations that create or enhance an insider threat mitigation program will see a return on investment (ROI), both tangible and intangible. **CISA's Insider Threat Mitigation workshop provides organizations with the tools to establish or improve their insider threat mitigation program through comprehensive guidance, interactive questions, and breakout sessions among participants.**

Workshop audiences also receive guidance on the use of the [Insider Risk Mitigation Program Evaluation \(IRMPE\) Assessment instrument](#), an interactive tool which allows organizations to better understand their security posture and tailor their Insider Threat Mitigation Program to address existing vulnerabilities.

For questions regarding the workshop, available insider threat mitigation resources, or general support, contact your local Protective Security Advisor or [Central@cisa.gov](mailto:Central@cisa.gov).
