

Government Telecommunications Service FREQUENTLY ASKED QUESTIONS

DEFEND TODAY,
SECURE TOMORROW

WHAT IS THE GOVERNMENT EMERGENCY TELECOMMUNICATIONS SERVICE?

The Cybersecurity and Infrastructure Security Agency's (CISA) Government Telecommunications Service (GETS) provides personnel across all levels of government (federal, state, local, tribal, and territorial [FSLTT]), the private sector and non-governmental organizations (NGOs) that have essential national security, national economic security, and national public health or safety missions the ability to complete landline telephone calls during periods of severe network congestion or disruption. GETS works through a series of enhancements to the landline network, but also provides priority calling to cell phones on all nationwide and several regional cellular networks. GETS subscribers receive a GETS card that provides GETS access phone numbers, a Personal Identification Number (PIN), and dialing instructions.

WHY IS GETS IMPORTANT TO ME?

Obstacles to communication take many forms. Extreme weather (such as hurricanes or earthquakes), cyber-attacks, terrorist attacks, incidents due to human error or equipment failures, and mass gatherings can prevent access to the telephone network. GETS facilitates important calls to get through and for vital information to be shared during these types of scenarios.

WHEN DO I USE GETS?

GETS is used when the landline network is congested and the ability to complete a normal call is hindered. To build muscle memory, GETS should also be routinely used in exercises or training scenarios.

WHO SHOULD HAVE GETS?

GETS is available to organizations across all levels of government (FSLTT), the private sector, and NGOs that have essential national security, national economic security, and national public health or safety missions. These organizations can be found within every one of CISA's critical infrastructure sectors. The personnel who perform essential functions across all levels in an organization – from Chief Executive Officers to field technicians and operators – should have access to GETS.

Organizations that should enroll in priority services:

- Government organizations and entities at federal, state/district, local (cities/counties), tribal, and territorial levels
- All agencies and organizations included in emergency management plans
- Any organization within one of the 16 critical infrastructure sectors (whether a governmental or private sector organization or public/private entity): Chemical, Commercial Facilities, Communications, Critical Manufacturing, Dams, Defense Industrial Base, Emergency Services, Energy, Financial Services, Food and Agriculture, Government Facilities [including school districts and higher education organizations], Healthcare and Public Health, Information Technology, Nuclear Reactors, Materials, and Waste, Transportation Systems, Water and Wastewater Systems).
- Non-Governmental or academic organizations with security, national economic security, national public health, or safety missions

Individuals who should be enrolled in GETS/Wireless Priority Service (WPS):

- Executive leadership (the “C-suite” of an organization)
- Media relations
- Emergency management personnel
- Continuity Planning/Continuity of Operations staff
- Department heads/managers and staff essential to continuity of operations
- Subject matter experts/trained specialists

- Continuity Planning/Continuity of Operations staff
- Front line personnel essential to carrying out organizational mission (all fire/rescue service and law enforcement personnel, regardless of rank, should be enrolled in GETS/WPS as they are all essential to their organization's mission)

HOW MUCH DOES GETS COST?

There is no charge to subscribers to enroll in or use GETS. GETS calls are currently billed to CISA at a rate of 7 to 10 cents per minute (depending on the carrier and other factors) for calls within the United States and its territories, Canada, and most of the Caribbean. International calls are billed at commercial rates, though international calling privileges are restricted to specific cards authorized by an organization's point of contact (POC).

HOW DOES GETS WORK?

GETS is accessed through a universal number (provided to subscribers on a GETS card) using common telephone equipment (landline, cellular, fax, and satellite phones). A series of prompts direct the entry of the GETS user's PIN and destination phone number. Once authenticated, the call receives priority treatment on the landline and cellular networks.

WHERE CAN I USE GETS?

GETS is available worldwide; however, GETS is primarily intended for calling within the United States and its territories. You can request international calling privileges for calls to international destinations. However, GETS provides priority treatment only in the domestic segment of the call. Once a GETS call that originates overseas reaches the United States it is routed to one of the three GETS interexchange (long distance) carriers: AT&T, T-Mobile, or Verizon for PIN validation. The call is then routed to its intended domestic or international destination.

DO I NEED EXTRA HARDWARE OR SOFTWARE?

No. Special phones and/or equipment are not required to use GETS. You will only need the universal GETS access number and a PIN, located on GETS card.

WILL GETS WORK ON MY CELL PHONE?

You can place a GETS call from a cell phone. However, the call will not receive priority treatment until it reaches a landline network. GETS calls over cellular networks are most effective when used in conjunction with WPS-- a companion service to GETS--that offers authorized users priority treatment on the cellular networks. To receive priority treatment in cellular networks, you must separately subscribe to the WPS.

WHAT FEATURES AND ENHANCEMENTS DOES GETS PROVIDE?

GETS enables call completion even in damaged or congested networks by providing numerous enhancements and key features:

- Toll-free numbers for direct carrier access
- Access control using PINs
- Failsafe access - if the access control system fails, GETS calls will automatically be allowed to complete
- Enhanced routing to one of the three GETS interexchange (long distance) carriers
- Alternate carrier routing in the event one of the interexchange carriers is unavailable
- Priority treatment with call queuing; GETS calls may queue for up to 30 seconds while waiting for resources to complete your call
- Exemption from restrictive network management controls during congestion
- International calling (when requested and authorized in advance)
- Interoperability with other networks

HOW EFFECTIVE IS GETS IN ACTUAL EMERGENCIES?

GETS is designed to provide 90% call completion rates when call volume is eight times greater than normal network capacity. In actual emergencies, GETS has consistently met or exceeded this call completion rate. To use GETS, users must have a dial tone.

CAN I USE GETS TO MAKE INTERNATIONAL CALLS?

GETS can be used to place calls to or from international locations, but the call will only receive priority while within the United States. Once a GETS call that originates overseas reaches the United States it is routed to one of the three GETS interexchange (long distance) carriers: AT&T, T-Mobile, or Verizon for PIN validation. The call is then routed to its intended domestic or international destination. GETS international calling privileges are restricted to specific cards authorized by an organization's POC.

HOW DO I ANSWER AN INCOMING GETS CALL?

Answering an incoming GETS call on a landline or cell phone is the same as answering any other incoming call; simply answer when the phone rings. There are no special indications that an incoming call is a GETS call.

CAN I SET MY CELL PHONE TO DIAL GETS?

The Priority Telecommunications Services (PTS) Dialer App (available for free download from the [Apple App Store](#) and [Google Play](#)) streamlines the GETS dialing process from smartphones by automatically using the user's PIN and GETS access number stored on the phone to place a call when a destination number is selected from the App's **Contacts**, **Recents**, **Frequent Calls**, or **Keypad** features. Methods also exist to program cell phones to assist in dialing GETS calls. Contact 24 User Assistance at [1-800-818-4387](tel:1-800-818-4387) or [703-818-4387](tel:703-818-4387) for information on programming cell phones for GETS calling.

HOW DO I ENROLL IN GETS?

Each organization has a **POC** that manages their organization's GETS accounts. If your organization is already enrolled, contact your POC and request a GETS card. Your POC will enroll you and issue your card. If your organization is not currently enrolled, begin the enrollment process by calling the **CISA Priority Telecommunications Service Center** at 866-627-2255 or 703-676-2255 or emailing support@priority-info.com.
