The President’s National Security Telecommunications Advisory Committee

The President’s National Security Telecommunications Advisory Committee (NSTAC) provides industry-based analyses and recommendations to the Executive Office of the President (EOP) on how the government can enact policy for, or take actions to enhance, national security and emergency preparedness (NS/EP) telecommunications.

The NSTAC is composed of up to 30 presidentially appointed senior executives who represent various elements of the telecommunications industry. The committee advises the president on a wide range of issues related to telecommunications, information systems, information assurance, infrastructure protection, and other NS/EP concerns. The NSTAC meets quarterly to discuss its activities.

BACKGROUND
In September 1982, President Ronald Reagan created the NSTAC by Executive Order 12382, President’s National Security Telecommunications Advisory Committee, to advise the president on matters regarding NS/EP telecommunications. Four issues prompted the establishment of the NSTAC: (1) the divestiture of AT&T, Inc.; (2) increased government reliance on commercial communications; (3) potential impact of new technologies on NS/EP telecommunications; and (4) the growing importance of command, control, and communications to military and disaster response modernization.

NSTAC ACCOMPLISHMENTS
NSTAC activities are the genesis for many technical reports, recommendations to the president, and NS/EP operational programs. Since its inception, the NSTAC has examined various issues, including network resilience and convergence; commercial satellite survivability; cybersecurity; intrusion detection; emergency communications and interoperability; and information system, network, and wireless services security. The government has acted on many of the NSTAC’s recommendations, which have culminated in successes such as the:

- **National Coordinating Center (NCC):** Acting as a government-industry coordination center for day-to-day operational NS/EP communications support, the NCC was officially recognized as the Communications Sector Information Sharing and Analysis Center in January 2000, and later integrated into the National Cybersecurity and Communications Integration Center (NCCIC), a 24-hour coordinated information sharing and incident response capability designed to protect and secure the Nation’s cyber infrastructure. The NCCIC and NCC are now implemented as part of the Cybersecurity and Infrastructure Security Agency (CISA) Central hub.

- **Telecommunications Service Priority System:** The regulatory, administrative, and operational authority that enables priority provisioning and restoration of telecommunications services.

- **Network Security Information Exchanges:** Government and industry meet bimonthly to voluntarily share information on related to threats posed to the public network when system vulnerabilities are exploited.

- **Information and Communications Technology (ICT) Supply Chain Risk Management Task Force:** The government’s highest profile public-private group addressing ICT supply chain security issues, the task force identifies actionable steps for risk management within the global ICT supply chain.

RECENT NSTAC ACTIVITIES
In May 2021, the EOP tasked the NSTAC with a study on “Enhancing Internet Resiliency [EIR] in 2021 and Beyond.” In this study, the NSTAC is examining software assurance; zero trust (ZT) networking and trusted identity management; the convergence of information technology and operational technology; and a strategy for increasing trust in the ICT and services (ICTS) ecosystem. Each phase will culminate in a separate report to the president. In November 2021, the NSTAC approved the phase I EIR report, which offers recommendations to secure software development lifecycle processes and deploy supply chain risk management best practices for mission-critical networks. In February 2022, the NSTAC approved the phase II EIR report, which offers guidance and recommendations that recognize the U.S. government’s broad opportunity and responsibility to help catalyze cybersecurity transformation through ZT adoption. Also, in November 2021, the EOP tasked the NSTAC with developing a letter to outline recommendations on how government and industry can work together to preserve the widespread use of the industry-driven standards development model and enhance U.S. competitiveness through effective participation in global standards bodies. In May 2022, the NSTAC approved the letter which outlines the NSTAC’s key observations regarding the current state-of-play of ICT standards development. Additionally, the letter includes the NSTAC’s key takeaways and recommendations on how to preserve and enhance U.S. competitiveness through participation in standards bodies and the appropriate role for government.

LEADERSHIP
The NSTAC Chair and Vice Chair are appointed by the president from current NSTAC membership. Mr. John Donovan, Lead Independent Director, Palo Alto Networks, Inc., serves as the NSTAC Chair, and Mr. Scott Charney, Vice President for Security Policy, Microsoft Corporation, serves as the NSTAC Vice Chair. The NSTAC is supported by the Secretary of Homeland Security, who is the Executive Agent for the NSTAC. CISA and the NSTAC’s Designated Federal Officer work closely with the EOP to coordinate the committee’s daily operations.

NSTAC CHAIR
Mr. John Donovan
Lead Independent Director
Palo Alto Networks, Inc.

Dr. Joseph Fergus
Founder, President, and CEO
Communication Technologies, Inc.

Mr. Angel Ruiz
Chair of the Board
MediaKind, Inc.

NSTAC VICE CHAIR
Mr. Scott Charney
Vice President for Security Policy
Microsoft Corp.

Mr. Patrick Gelsinger
CEO and Member of the Board
Intel Corp.

Mr. Stephen Schmidt
VP, Chief Security Officer
Amazon

Mr. Peter Altabef
Chair and CEO
Unisys Corp.

Ms. Lisa Hook
Managing Partner
Two Island Partners, LLC

Mr. Gary Smith
President and CEO
Ciena Corp.

Mr. Matthew Desch
CEO and Member of the Board
Iridium Communications, Inc.

Mr. Jack Huffard
Co-Founder and Member of the Board
Tenable Holdings, Inc.

Mr. Jeffrey Storey
President and CEO
Lumen Technologies, Inc.

Mr. David DeWalt
Founder and Managing Director
NightDragon Security, LLC

Ms. Renée James
Founder, Chair, and CEO
Ampere Computing, LLC

Mr. Hock Tan
President, CEO, and Director
Broadcom, Inc.

Mr. Raymond Dolan
Chair and CEO
Cohere Technologies, Inc.

Mr. Mark McLaughlin
Chairman
Qualcomm
