OVERVIEW

The Cybersecurity and Infrastructure Security Agency (CISA) “PTS Dialer” app provides a streamlined way of making Government Emergency Telecommunications Service (GETS) and Wireless Priority Service (WPS) priority calls. The PTS Dialer simplifies the GETS and WPS dialing processes and reduces dialing errors.

DOWNLOADING AND INSTALLING

Note: please contact your IT department if there are organizational restrictions on installing apps.

1. Visit the Google Play Store from your phone.

2. Search for “PTS Dialer” (Figure 1). [1]

3. Download and install the PTS Dialer app (Figure 1). [2]
WELCOME SCREEN

The welcome screen (Figure 2) introduces the different features of the PTS Dialer. After you make your first call, Frequent Calls (Figure 3), a list of the most frequent calls made using the PTS Dialer, will replace the welcome screen. More information about Frequent Calls can be found on Page 9.

Figure 2 - Welcome screen

WPS/GETS Test Call initiates test calls

Figure 3 - Frequent Calls

Access the menu items, including:
- Settings
- Help
- Privacy
- About

Recents displays a list of the most recent PTS Dialer outbound calls

Dial any number with the Keypad
CONTACTS

Contacts can be used to select phone numbers stored in the phone’s native contact list. Tap the Contacts button, select a contact from the list, and then tap either the contact’s phone number or the call button. Either option will load the phone number into the Service Selection screen (discussed on Page 11).

Figure 6 - Contact’s numbers
RECENTS

**Recents** displays a list of the most recent calls (in reverse chronological order) made from the PTS Dialer. Numbers without an associated contact will still display operational information (date, time, and service used). Tap the **Recents** button and select an entry to load the phone number into the **Service Selection** screen (discussed on Page 11).

**Figure 7 - Welcome screen**

**Figure 8 - Recents**

**Figure 9 - Selected contact**
RECENTS (CONTINUED)

To delete an entry from Recents, swipe left on the entry (Figure 10). Once the entry is deleted, a Removed item pop-up will display at the bottom (Figure 11). Tap UNDO to retrieve the deleted entry. Once the pop-up disappears, the item is permanently deleted.

Figure 10 - Delete Recents entry
Delete a Recents entry

Figure 11 - Undo delete Recents entry
Removed item pop-up
RECENTS (CONTINUED)

Multiple entries can also be deleted from **Recents**. To enter the multiple entry delete feature, press down and hold an individual entry for 1 second (**Figure 12**). Tap the checkboxes to select the entries to be deleted and then tap the trash can to delete them. To exit without deleting, tap the back arrow at any time. Once the entries are deleted, a **Removed item** pop-up will display at the bottom (**Figure 13**). Tap UNDO to retrieve the deleted entries. Once the pop-up disappears, the items are permanently deleted.

![Figure 13 - Undo delete Recents entry](image)
FREQUENT CALLS (MAIN SCREEN)

After your first call, the welcome screen will be replaced by Frequent Calls, which will serve as the main screen for the PTS Dialer going forward. The primary sections of the main screen include WPS/GETS Test Call and the list of the most frequent calls that have been made using the PTS Dialer. Tap WPS/GETS Test Call or an entry to load the phone number into the Service Selection screen (discussed on Page 11).

**Figure 14 - Main screen**

Lists the destinations of the most Frequent Calls from the PTS Dialer

**Figure 15 - Frequent Calls entry**

WPS/GETS Test Call initiates test calls

Contact name

Frequently called number
KEYPAD

The keypad can be used to enter a destination number. If you tap Keypad and want to get to the Frequent Calls list, tap the arrow on the bottom left of the keypad to minimize it.

1. Tap Keypad, shown at the bottom of Figure 16.
2. Enter a destination number using the keypad (Figure 17).
3. Tap the green Call button.

![Figure 16 - Main screen](image1)

![Figure 17 - Keypad](image2)
SERVICE SELECTION SCREEN

The **Service Selection** screen ([Figure 18](#)) is where you choose the service to complete your call.

Once you have selected your destination number from **Contacts**, **Keypad**, **Recents**, or **Frequent Calls**, tap **WPS**, **GETS**, or **WPS+GETS** to initiate your call based on the usage guidelines below.

- If you have WPS enabled on your phone and also have GETS, first select **WPS**. Then, if that call is unsuccessful, select **WPS+GETS**.
- If you only have WPS enabled on your phone, select **WPS**.
- If you only have GETS, select **GETS**.

Once you are finished with your call, tap the red **End Call** button ([Figure 19](#)).

*Note: more detailed information about GETS calls on Page 12.*
MORE INFORMATION ABOUT GETS CALLS WITH THE PTS DIALER

When using Auto Dial GETS PIN (enabled by default), your GETS PIN and destination number will be automatically entered four seconds after the GETS access number is auto-dialed. Unless you are having issues completing a call, keep Auto Dial GETS PIN enabled (Figure 20).

![Auto Dial GETS PIN toggle (in ON position)](image)

Figure 20 - Auto Dial GETS PIN
MORE INFORMATION ABOUT GETS CALLS WITH THE PTS DIALER (CONTINUED)

Due to network congestion, poor wireless signal strength, and other circumstances, the auto dial mode may still fail. If it fails, you will typically hear a recorded voice announcement (RVA) that asks you to re-enter your GETS PIN, or an operator will come onto the call. If you hear the RVA, hang up and try the GETS call again. If your calls continue to fail, try these additional steps, in order, until your call completes:

1. Hang up, disable Wi-Fi Calling on your phone, and try the GETS call again. (Note: GETS calling may not work with Wi-Fi.)
2. Hang up, increase the Pause Length in Settings, following the instructions on Page 15 and then try the GETS call again.
3. Hang up, disable Auto-Dial GETS PIN, and try the GETS call again, following the instructions in Figure 21.

If you continue to reach an operator or are asked to re-enter your PIN, you may say or type your GETS PIN and destination number using (a.) your GETS card or (b.) the GETS PIN and destination number that scroll at the top of the call screen.

Disabling Auto-Dial GETS PIN
To make a GETS or WPS+GETS call in the manual dialing mode, change the Auto Dial GETS PIN toggle to the OFF position (Figure 21). The toggle will turn gray, the GETS Manual Dial Tutorial will be available, and manual calling will be enabled.

## SETTINGS

To access **Settings** from most screens, open the menu located in the upper right (Figure 22) and choose **Settings** (Figure 23) from the list of options.

In the **Settings** screen (Figure 24), the Android version of the PTS Dialer displays six sections: **GETS PIN**, **Test Call Number**, **Pause Length**, **Speaker**, **Calling from Outside U.S.**, and **GETS Access Number**.

- **GETS PIN**
- **Test Call Number**
- **Pause Length**
- **Speaker**
- **Calling from Outside U.S.**
- **GETS Access Number**
- **Other available access numbers**
SETTINGS (CONTINUED)

GETS PIN (Figure 24)
To make GETS calls, you will need to enter a GETS PIN in this field. Simply tap inside the textbox and enter your GETS PIN (shown on the front of your GETS card) using the keypad. When complete, tap outside the textbox to save it. You’ll then be prompted to make a test call to verify your GETS PIN (Figure 25). The test call is automatically placed to the Familiarization Line, at 703-818-3924. We strongly advise you to make this test call to verify your GETS PIN.

![GETS PIN Changed test call prompt](image)

Test Call Number (Figure 24)
The destination number for the WPS/GETS Test Call feature defaults to the Familiarization Line, but it can be changed to any phone number using this setting. Enter a number in the field, and when you return to the main screen, it will display the new number. To use the default phone number, leave the field blank.

Pause Length (Figure 24)
The Pause Length adjusts the amount of time before the PTS Dialer enters your GETS PIN. If you find your calls are not completing, you may need to adjust the pause length. First, try increasing the pause length. If you find that an operator is answering your calls, you will need to decrease the pause length.

Speaker (Figure 24)
The Speaker setting turns the speaker on by default when a call is made. While in a call, the speaker can be toggled on or off using the phone’s native speaker control. Doing so will not change the Speaker setting in the PTS Dialer app.

Calling from Outside U.S. (Figure 24)
GETS calls are routed to the United States regardless of the ultimate destination country. If you are outside the United States and want to make a GETS call, you must insert the international calling access code from the caller’s location and the destination country code (“1” for the United States) to complete the call. The “+” sign automatically inserts the international calling access code for the caller’s location, so prefixing GETS calls with “+1” enables the call to reach the GETS Access Number in the United States.

Enabling Calling from Outside U.S. adds “+1” to the front of the dial string so that GETS calls from international locations can reach the GETS Access Numbers, which are based in the U.S. Calls are then handled as if they originated in the U.S. As a result, if your destination number is outside of the U.S., you will need to add the country code of the destination country to the intended destination number. However, if the destination number is within the U.S., you will not need to add the “+1” prefix.

GETS Access Number (Figure 24)
This is the phone number used to access GETS through one of the three GETS Inter-Exchange Carriers (IXCs). The number can be selected on the Settings screen. The AUTO option (the default) automatically selects the best access number. Changing this setting is not recommended unless you are having difficulties completing calls. The GETS Access Numbers list may vary depending on your wireless service provider.
HELP

To access Help from most screens, open the menu located in the upper right (Figure 26) and choose Help (Figure 27) from the list of options.

In the Help screen (Figure 28), the PTS Dialer displays four sections: 24hr User Assistance, App Feedback, Useful Information, and Frequently Asked Questions.

24hr User Assistance (Figure 28)
User assistance is available 24 hours a day, 7 days a week. If you tap the phone number in the 24hr User Assistance section, it will make the call from your native Android dialer.

App Feedback (Figure 28)
Contact information to reach the app developers with feedback or feature suggestions.

Useful Information (Figure 28)
Tap on About GETS or About WPS for more information about the services.

Frequently Asked Questions (Figure 28)
Tap on any of the questions to reveal information about the topic.
PRIVACY

To access Privacy from most screens, open the menu located in the upper right (Figure 29) and choose Privacy (Figure 30) from the list of options.

The Privacy screen displays the Privacy Policy for the PTS Dialer.

ABOUT

To access About from most screens, open the menu located in the upper right (Figure 31) and choose About (Figure 32) from the list of options.

The About screen (Figure 33) shows a brief description of the PTS Dialer and the version of the app installed on the phone.
