

Don't Let Ransomware Hold your Data Hostage

Ransomware can cripple your entire practice or organization

A Ransomware attack occurs when hackers gain control over data or computer systems and hold it hostage until a ransom is paid. This can put your patients in danger and prevent you from delivering care in a timely fashion.

Did you know most Ransomware attacks begin in email phishing campaigns asking you to click a link or open an attachment?

Protect your patients and ensure on time care delivery by being cyber vigilant.
